Active Projects on LinkedIn | **Fully Vaccinated**

Education

DELAWARE COUNTY COMMUNITY COLLEGE, Media, PA- Associate in mechanical engineering (Aug 2018-Dec 2020)

Core Competencies

- Knowledge of 6 Sigma & Lean Manufacturing
- Knowledge of vision-based systems.
- Intermediate with schematic interpretation
- General Understanding of Hydraulic and Pneumatic systems
- CAD/CAM: AutoCAD, SolidWorks
- GMP and GDP
- Troubleshooting of electronic-mechanical devices
- Ability to use common power and hand tools.
- Good written and verbal communication skills
- PLC: Allen Bradley, Automation Direct, Siemens

[Can provide personal tools needed for given job.]

Professional Experience

Barry Callebaut- Electro- Mechanical and Controls **Jun 2025-Current**
Eddystone, PA

[Position Snapshot]

- **Work Condition:** [On-Site] Industrial Manufacturing Facility | Cocoa Industry | Night Shift (12r) [Wed-Sat]
- **Team Collaboration:** Operations and Operating supervisors, Product line experts, Quality assurance, Process and automation engineers
- **Primary Focus:** Maintained and troubleshot production equipment by executing PM/PdM, diagnosing failures across electrical and mechanical systems and industrial controls (AC/DC circuits, PLC I/O, VFDs, sensors), and documenting repairs in the CMMS while meeting GMP, HACCP, and safety requirements.

Technical responsibilities:

- Supported automated production and packaging equipment including BEUMER Robotpac (FANUC robotic palletizer), BEUMER stretch hood, case packers, diverters, pneumatic conveying systems, batch reactors, cocoa bean winnowers, hopper silos, chillers, and oil-free rotary screw compressors.
- Utilized schematics and electrical test equipment to effectively test and troubleshoot electrical faults in industrial control panels, identifying issues and implementing solutions to minimize disruptions.
- Diagnosed and repaired electrical and electromechanical faults using schematics and test equipment across AC/DC circuits, motors, sensors, and industrial control panels, including drive-related faults on Danfoss VLT VFDs.
- Performed controls troubleshooting on Siemens SIMATIC PLC-controlled systems using TIA Portal, HMI diagnostics, and cabinet-level electrical checks to isolate faults and return equipment to service.

Sharp Packaging- Systems and Automation Technician **Jan 2024-Jun 2025**
Allentown, PA

[Position Snapshot]

- **Work Condition:** [On-Site] Industrial Packaging Facility | Pharmaceutical Packaging Industry | Night Shift (8r) [Sun-Thur (Every other weekend)]
- **Team Collaboration:** Service Mechanics, Quality Assurance Specialist, Packaging associates, continuous improvement engineers, Engineering technicians
- **Primary Focus:** Maintained, troubleshot, and enhanced vision-based automated systems for packaging/serialization of pharmaceutical products.

Technical responsibilities:

- Managed and repaired Systech-Cognex industrial cameras for 1D, 2D and OCV serialization systems.
- Provided support to mechanics by conducting predictive, preventative, corrective, and routine maintenance on printing, aggregation, and shipping conveyors, contributing to smooth operations, and minimizing downtime.
- Disassembled, Repair, assemble and install electrical, electronic, mechanical, hydraulic systems.
- Utilized schematics and electrical test equipment to effectively test and troubleshoot electrical faults in industrial control panels, identifying issues and implementing solutions to minimize disruptions.
- Performed necessary repairs to recover from component failure, identify defective components, specify, and communicate to supervisor, parts needed to make repair or to be replaced.

[Non-technical experience: Values into Action- Direct Care Provider (See LinkedIn) Mar 2016-Oct 2023]

Waters Corp. TA Instruments- Manufacturing Engineering Technician
New Castle, Delaware

Mar 2022- Sep 2022

- [Snapshot]**
- Work Condition:** [On-Site] Industrial Manufacturing Facility | Biotech & Pharmaceuticals Industry | 8hr shifts.
 - Team Collaboration:** Product, Mechanical, Research & Development and Electrical Engineers.
 - Primary Focus:** Improving the manufacturing process of Refrigerated Cooling System (RCS): 1-4 phase compact HVAC systems using specialized refrigerants.
 - Lean Manufacturing (Continuous Improvement):** Improved production by 10% by internalizing unit documentation into SAP. Increased bulk orders of materials and components to prevent supply chain bottlenecks. Drafted 4 designs to improve unit yields.

- Technical responsibilities:**
- Completed unit assembly by installing all unit components, testing, and packaging in accordance with SOP to support production targets and staff shortages.
 - Improved manufacturing efficiency by inspecting and repairing electrical, electric-mechanical, hydraulic, and pneumatic components to minimize defects.
 - Collected data testing, production, unit defects to provide feedback for continuous improvements.
 - Trained technicians on installation, machinery, and safety procedures.
 - Executed scheduled Preventative and Predictive Maintenance and planned work, and documented the services performed.

Rowa Group Inc- Technical Support Engineer
Croydon, PA

Aug 2020- Dec 2021

- [Snapshot]**
- Work Condition:** [On-Site] Industrial Manufacturing Facility | Plastic Industry | Rotating 12hr shifts.
 - Team Collaboration:** Mechanical, Quality assurance, Chemical engineers, and Production technicians.
 - Primary Focus:** Improve the efficiency of production operation and machinery.

- Technical responsibilities:**
- Monitored lines to ensure production lines and equipment were functioning normally and make necessary adjustments as may be required to keep the lines running.
 - Completed tear down of all equipment for cleaning and processing, inspected parts for wear, tear and damage, replaced parts if needed to produce quality products.
 - Supported Mechanical Engineers with preventative maintenance repairs including Feeder Controls, Hydraulic systems, Pneumatic systems, and other mechanical designs.
 - Performed necessary repairs to recover from component failure, identify defective components, specify, and communicate to supervisor, parts needed to make repair.
 - Supported chemical engineers in polymer laboratory testing, and developing IQ protocols for color matching, product testing, and system operation.
 - Conducted a variety of polymer/plastic testing, including impact, tensile, friction, water, thickness, thermal, color, and weight tests.

Internships

Widener University- Robotics Research Intern

Sept 2022-Dec 2022

- Work Condition:** [On-Site] Lab Environment | Robotics Industry | 4hr shifts.
 - Collaboration with:** Dr. Xiomeng Shi
 - Primary Focus:** Designed and optimized mobile base unit for robotic body.
- Used SolidWorks to draft motorized base component designs.
 - Tested simulation of the Robot with base component design in Oracle VM VirtualBox.
 - Built scaled models to test in real world environment.
 - Collected data and adjusted designs for final model.

Temple University- Researcher at Temple Material Institute fellowship

May 2021-Aug 2021

- Work Condition:** [On-Site] Lab Environment | Physics | 4-8hr shifts.
 - Collaboration with:** Dr. Jeffrey Martoff and Dr. Samuel Kim
 - Primary Focus:** Extrapolate and study radioisotope data in connection with Anti-Neutrino Anomaly.
- Utilized Temple University Germanium Detector (GMX) to collect radioisotope data.
 - Analyzed and sorted isotopic data using RadiCalc, a radioactive decay algorithm.
 - Compared tested data with peer-reviewed paper on radioactive decay and the Anti-Neutrino Anomaly.
 - Adjust experiment parameters and retest when data was inconclusive.
 - Presented research findings at the Temple symposium and assisted colleagues with their research projects.
